

E-Commerce Sales Dashboard

Power BI Portfolio Project Report

1. Project Overview

This interactive Power BI dashboard provides an overview of e-commerce sales performance. It focuses on revenue, profit, order volume, quantity, product performance, categories, sales channels, order status, monthly trends, and city-level filtering.

2. KPI Summary

KPI	Value
Total Sales	3.44M
Total Profit	1.15M
Total Orders	500
Total Quantity	1K

3. Dashboard Analysis

- Category Performance:** Electronics contributes the highest sales among the displayed categories, followed by Fashion and Accessories.
- Order Status:** Delivered orders form the largest portion of total orders, with Pending, Returned, and Cancelled orders also represented.
- Sales Channels:** Instagram, Daraz, Mobile App, and Website are compared using a donut chart.
- Top Products:** Smart Watch leads the displayed Top 5 products by sales, followed by Sneakers, Power Bank, Backpack, and Headphones.
- Monthly Trend:** Sales vary across the months, with higher values around May and June and a visible decline in July and September.

- **City Filter:** The dashboard includes city slicers such as Peshawar, Islamabad, Lahore, Karachi, Mardan, Multan, Quetta, Rawalpindi, and Abbottabad.

4. Tools & Skills Demonstrated

Microsoft Power BI, interactive dashboard design, KPI cards, slicers, bar charts, pie/donut charts, line charts, filtering, data analysis, and business reporting.

5. Conclusion

The dashboard provides a concise view of e-commerce performance and can help users monitor key KPIs, identify strong product and category performance, compare sales channels, and observe monthly sales trends. It was developed as a portfolio project to demonstrate practical data analyst and Power BI skills.
